

The Sporttraxx GL200WXT

Installation

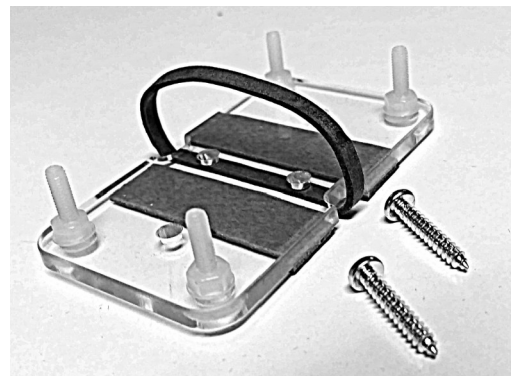

Where to fix the tracker in its cradle:

- on top of the dashboard, in a way that allows its top to have free view of the sky through the windscreen
- in the center of the dashboard, the buttons facing to the crew, reachable by both driver and codriver

How to fix the cradle:

- Assemble the cradle using the 4 Nylon screws and nuts
- Clean the surface of the dashboard
- Remove the protection film from the adhesive tape
- **Insert the rubber in its position** then
- Press the cradle in its final position. The cradle must be strongly attached to the dashboard
- if needed, use the provided screws, best in the 2 central holes

How to use the tracker

The tracker will be inserted on the 4 pins and secured through the rubber. When you will receive it at the start line, it will be already working. Only if needed, you might be asked to turn it on using the on/off button.

In case you stop in a stage please:

- press the OK button (for 3 seconds) if you are fine
- press the SOS button (for 3 seconds and then repeat after 5 seconds) **ONLY** if you need urgent medical assistance
- as an acknowledgement of your messages, HQ will reply by turning on a blue led

Reset You might be asked to reset the tracker. Please press shortly the ON-OFF & OK buttons together. The tracker will turn off and restart. Make sure, after this action the blue flashing leds on top of the device are on. Otherwise start the tracker using the ON button

At the end of the rally, the tracker will be collected before entering parc ferme. If you retire before please make sure you return the tracker to Sporttraxx technician **ONLY**. Failing to do so, you might be charged with the deposit value.
